PREFACE

The mineral production data are compiled from published documents from Statistics Canada and from published and unpublished documents from the Mineral Development Branch of the New Brunswick Department of Forests, Mines and Energy

All quantities are reported in metric equivalents. Production quantities, where they apply to individual producers, are left out of listings. Such omissions are denoted in the lists by the letter "E". A zero in any of the lists indicates no production for that particular mineral commodity in that year.

All 1985 data reported in this volume are preliminary.

Graphs in this report are intended to provide a quick visual indication of the trend of mineral production in New Brunswick. These graphs were produced using SAS routines (SAS Institute (Statistical Analysis System) and were run on the IBM Computer at the University of New Brunswick. Because of the coarse resolution of plotting, the listings should be consulted for accurate volume and value statistics. The value statistics are provided in both current and constant Can. 1985 dollars($) (1985$=1.000).

Plot types:

1. Quantities vs. Year of Production.
2. Value ($) vs. Year of Production
3. % Contribution to Total Annual Value of Production vs. Year of Production.
